EDUCATION

Acropolis Institute of Technology & Research — **Indore, M.P.**
Bachelor of Technology in Computer Science and Engineering – CGPA: 7.12 — 2022 - 2026

Sahara Public Higher Secondary School — **Kalapipal, M.P.**
Class 12th: 80.2% — Class 10th: 95.2% — 2018 - 2020

PROFESSIONAL SUMMARY

Computer Science engineering student with hands-on project experience in MERN Stack development and AI/ML applications. Skilled in building REST APIs, full-stack web applications, and RAG-based document question-answering systems using Python, FastAPI, and vector databases. Experienced in integrating AI APIs, developing database-driven applications, and solving real-world problems through practical projects. Seeking an entry-level opportunity in AI/ML or Full-Stack Development.

PROJECTS

LikeMind Connect AI — **Live Project**

- Developed frontend using React.js and Tailwind CSS, implementing responsive UI, real-time chat with Socket.io, and secure user authentication flows.
- Built backend APIs with Node.js, Express.js, and MongoDB, integrating JWT authentication, password hashing, email verification, and real-time notifications for enhanced security and user experience.
- Integrated AI/ML features using Python, spaCy, Pinecone, and Google Gemini API for smart matching of users based on shared interests and hobbies.

DocuMind AI – AI-Powered PDF Question Answering System — **Live Project**

- Developed an AI-powered Retrieval-Augmented Generation (RAG) system using Jina AI Embeddings, ChromaDB, and Groq LLM to answer user queries from uploaded PDF documents with contextual accuracy.
- Implemented document parsing, text chunking, vector embeddings, and semantic retrieval, enabling efficient knowledge extraction and improving the relevance of generated responses.
- Optimized the AI pipeline using FastAPI, vector similarity search, and prompt engineering, delivering fast, context-aware answers while handling large PDF documents efficiently.

SMS Spam Detection — **Live Project**

- Developed a machine learning–based SMS spam detection system using NLP techniques to classify messages as spam or legitimate.
- Performed text preprocessing including data cleaning, tokenization, stopword removal, and TF-IDF vectorization.
- Built the solution using Python, Pandas, NumPy, Scikit-learn, and NLTK.

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, JavaScript, HTML/CSS, DSA
Frameworks: React, Node.js, Express, FastAPI
AI/ML: ML algorithms ,Deep Learning, NLP, LLM, RAG
Developer Tools: Git, GitHub, VS Code, Postman
Databases: MongoDB, MySql

CERTIFICATIONS & ACHIEVEMENTS

AWS Academy Cloud Foundations – AWS Academy Graduate (20 hrs), Issued by Amazon Web Services Training and Certification, **Verify Badge**

Intro to SQL – Kaggle Certificate of Completion, **Verify on Profile**

LeetCode: 250+ problems solved, **Verify on Profile**

Portfolio: arvindmeena.netlify.app
